E. SESSION SUMMARY

SG1A

The target [REDACTED] is associated with a red soiled rocky geographical location. This area in terms of climate can be very hot. A young man is associated with this tasking who has dirty blond or light brown straight short hair, light eyes, and may wear gold framed glasses. Planes fly over this location. There is a facility in the area or concrete structure which has to do with electronics. Some type of radio or electrical tower is in the vicinity. Weather conditions, some type of sky activity, or signals, are received near this location.

SG1A

The target [REDACTED] is associated with a place where people meet near high ground and is California related. Contraband or

drugs are shipped/dropped in relation to this location. A male individual is involved in the exchange for profit and is a good source. A ring operates from here and is expanding in the way of people. The name "Sam" may be relevant. This group has gotten away with a fast track activity in the past. There is some travel by land near the coast where contraband is sometimes received. There may be some activity next month that is not coming inland but traveling outward from the land or harbor. A connection with vessels, shipping merchants, freights or freighters may be made. By June something, possibly a vessel, will be sent out across water in a southern direction for return of illegal cargo to the United States. This activity will be finalized in the June time frame.
